

Assignment 13 link: <https://felipeflima.github.io/assignments/assignment13.html>

Name:	Felipe Lima
Section (#, Leader):	011, Celine

Mid-Term Revisions		
<i>In this section, you should add as many rows as needed to outline the feedback from your mid-term (graded, design, and peer) and what you will do to address that feedback on the final.</i>		
Type of Feedback (Graded / Design / Peer)	Feedback	What Will You Do?
Graded / Design	I really love your about page. I wonder if you could use that format on other pages (like the Projects and Contact pages).	
Graded / Design	I think the home page photo should be bigger.	DO: Make the photo bigger
Graded / Design	Try changing the footer bar to be the same color as the nav bar (although I don't hate the color now).	DO: Nothing. I tried it out and I like the different colors better.
Peer	The color scheme is really cool, but my favorite part is the "about" section of your website. It is super creative and a fun way to learn more information about you.	Thanks! DO: Nothing
Peer	I wish the hover interactions had an easier-to-see color. Not a big issue at all tho.	DO: I will make the hover states more noticeable but still keeping it sutil.
Peer	I am wondering what it would like if the about page had some hover interactions. What would happen if Felipe.origin turned orange, for instance?	I don't really see the point in adding hover states for non clickable objects. DO: Not changing it.
Peer	I really like the colors he used and the under nav bar on the bottom. I also like how he filled his contact page and centered it.	Thanks! DO: Nothing

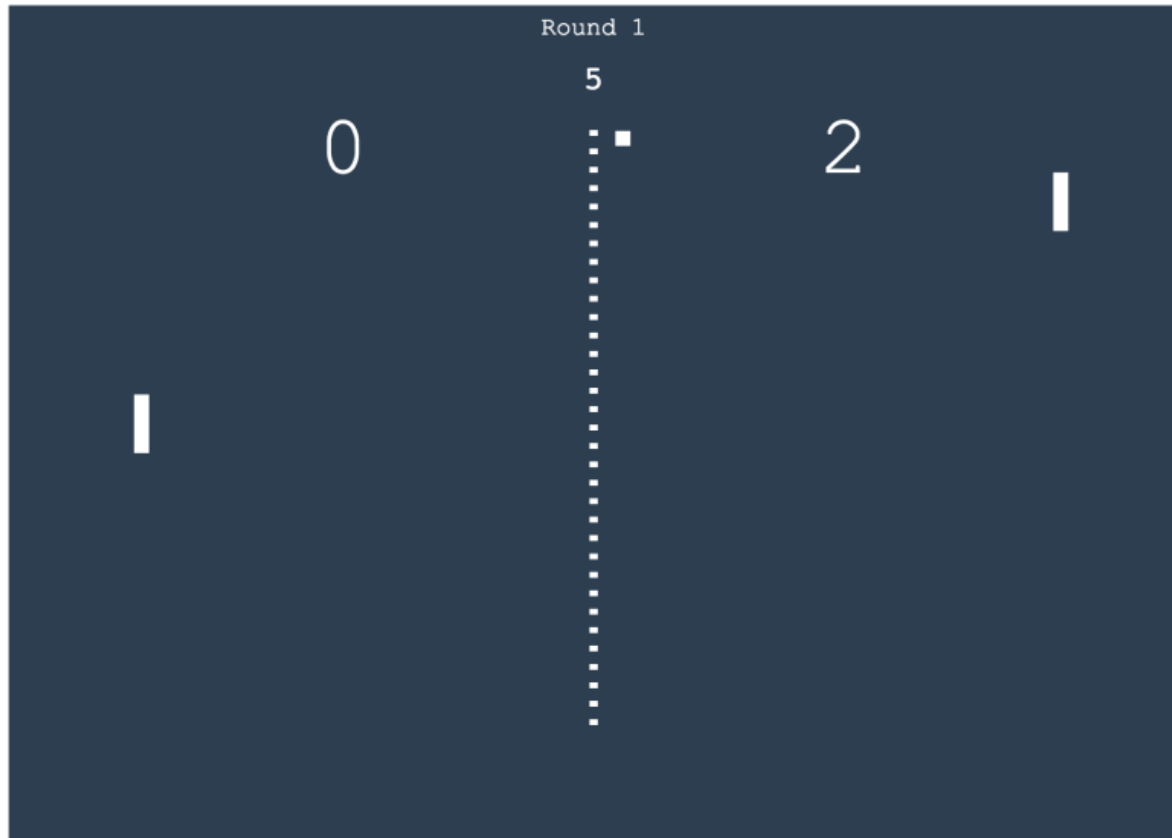

Peer	I really like his about page but it could be a bit confusing to some people so maybe changing that up a little bit.	The idea is to have a website that might be reviewed by potential employers in the tech industry, so I like how it demonstrates creativity and associates me with computer science. At the same time it has a terminal like structure, I believe anyone that takes a second look is able to understand it, even if they have no CS background. DO: Not changing it.
Peer	I am wondering a little more about his assignments outside of this class and work.	DO: Changing the projects page to have in class assignments and out of school projects.
Peer	I like the font he chose. I also really like the about page.	DO: Nothing
Peer	I wish the font on the about page was a little bigger.	DO: Make the font bigger
Peer	I do like the picture on the home page, but I wonder if it would be better as a headshot.	DO: Make size adjustments to the picture but not adding a headshot.
Peer	I like the layout, especially the about page, everything is really cohesive and well done.	DO: Nothing
Peer	I'm wondering how he made the about page!	DO: Nothing
Peer	i like the colors and layout of his page	DO: Nothing
Peer	i wish that the project page could have better flow and maybe the boxes could be more transparent?	DO: Adjust the projects page making it look more aesthetic and give it a better flow. Changing the layout of the projects maybe adding a shadow and changing the images.
Peer	i wonder what else he could add to make his pages have better flow	DO: Nothing

Peer	I like the organizaiton of the website. I like the links at the bottom of the page, makes it look professionals. I like how the nav bar oesn't move. The about page is really fun	DO: Nothing
Peer	having a 'thank you' message after submitting your message	DO: Add some sort of feedback to the send message button. Not actually making it active for now so I don't get spammed on my email.
Peer	How the nav bar doesn't move	DO: Nothing
Peer	I really like how clean the font is and how the colors look together. I also like that there was both a navigation bar and a footer that contained links to his social media pages. The contact page also looks great and is laid out in a very straightforward way.	DO: Nothing
Peer	I wish the about me page had an image or something to make it feel more personal, but I do like how you incorporated a coding language font.	DO: Nothing
Peer	I am wondering if the website would look a little more cohesive if the page title layout was incorporated on the home page as well.	DO: Nothing

JavaScript Project

In this section, outline the project you will do in JavaScript. Consider using bullet points, and creating a prompt like the one seen in Assignment 13 Part 1. [Note: this is highly open-ended]

Recreate a version of the very first commercially successful video game ever: The Pong Game

Features:

One board on each side of the “field” that a user is allowed to move using either the keyboard or mouse. Ball in the middle bounces back and forth until it hits a wall and then a point is assigned to the opposite player.

Scoreboard on top

(Basically the normal game like the above)

Extra features:

Allow for 2 players

Different levels of difficulty

Allow for light and dark mode
