**What have you worked on during Week 14 related to your final project?  
If you haven't, why not?**

I have not started to work on my final project yet. This has been a stressful week with closer deadlines than this final project. I am confident that I still have time and will be able to finish the project on time. Just as an example due Thursday I had a CyberSecurity project and due Sunday along with my group we have to finish coding a digital wallet platform on Android.

**What do you plan on working on during Week 15 related to your final project?**

I plan on fixing all the proposed issues on the project contract and start coding the pong game. Hopefully get really close to being done and then just final adjustments before the deadline on Tuesday.

**What roadblocks or problems are you encountering?**

Other than time to start the project, no roadblocks so far. It should be a fun project!

**What roadblocks or problems do you think you might encounter?**

I decided to create a Pong Game and I might encounter some issues during the development process but nothing I can't overcome. Issues could be related to normal compiling issues etc.

**Anything else you want to us to know? (This question is okay to leave blank or not answer).**

N/A
